DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 21, 2004, has been entered.

Allowable Subject Matter

2. Claims 1-9 are allowed.
3. The following is an examiner's statement of reasons for allowance: This invention deals with twisted pair cable separator spline comprising a cross section having a major axis and a minor axis, wherein at least one pocket is on the major axis and at least one pocket is on the minor axis, wherein the major axis has a length greater than the length of the minor axis (claim 1). This invention also deals with a communication cable separator spline comprising pockets having a cross-sectional area which is 75% or less than a cross-sectional area of a circular envelope of an insulated cable to be placed in the pockets (claim 3 & 5).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments filed June 21, 2004 have been fully considered and they are persuasive. Specifically, the argument stated in the applicant's Declaration filed under 37 CFR 1.132, stating that "it would not be obvious to me, a person skilled in the twisted pair cable separator spline and data cable art, nor do I believe to anyone having ordinary skill in the twisted pair cable separator spline and data cable art from reading and understanding Ikeda, to manufacture a twisted pair cable separator spline wherein the cross-section of the spline has at least one pocket on the major axis and at least one pocket on the minor axis with the major axis having a length greater than the minor axis", is persuasive and therefore claims 1-9 have been allowed.
